

DEVELOPMENT ENGINEER (M/F/D)

Starting in October or November, we are looking for a full-time **Development Engineer** at our location at KIT in Karlsruhe, Germany, to support our engineering team.

About Rement

Rement develops a technology to recover new raw materials from demolition concrete while storing CO₂ in the process. We are currently working on a pilot plant as we move toward our first commercial plant. At Rement, you will have the opportunity to learn with and from a highly motivated engineering team, grow personally, and get to know the dynamics of a deep tech startup.

Responsibilities

- Design and implementation of control and automation systems
- Mechanical design of components and assemblies with CAD
- Design and optimize process analytics in-line and on-line
- Process optimization based on process analytics and automation concepts
- Development of customized solutions for our technology challenges
- Conceptual design, startup and optimization of pilot size equipment/processes

Qualification

- Degree in Mechanical Engineering, Mechatronics, or Process Engineering with Focus on Automation, or similar
- Broad technical skills and interests combined with hands-on-mentality and problem-solving experience
- At least 3 years of relevant job experience
- Programming skills and experience in implementing control systems
- Team player
- English language skills (allow technical communication)
